

FUTURE FOUNDER 2.0

Official Demo Day Presentation Guidelines & Evaluation Framework

Presentation Date: June 22, 2026

As we approach the final milestone of the Future Founder 2.0 (FF2.0) pre incubation cohort, this comprehensive document serves as the official framework for your upcoming Demo Day presentations on June 22, 2026.

1. PRESENTATION LOGISTICS & TIMELINE

To preserve equitable evaluation conditions and meet critical scheduling requirements, time boundaries will be strictly enforced via automated timers:

Pitch Segment

Duration: 5 Minutes Maximum
Focus entirely on high-impact validation, product synthesis, and commercial capabilities. Slides will be cut off instantly at the 5-minute mark.

Q&A Segment

Duration: 3 Minutes Maximum
Defend validation mechanisms, unit economics, and operational architecture before the executive evaluation panel.

2. PITCH DECK STRUCTURE (THE 7-SLIDE FRAMEWORK)

Founders must construct their slide sequences according to the exact parameters outlined below to ensure consistent and uniform review by the program evaluators:

Slide Title	Core Directives & Metrics	Critical Visual Elements
1. The Hook & Intro	Startup name, clear corporate tagline, and a definitive one-sentence declaration of the core business function. Identify presenting founder name and title.	High-resolution brand logo; minimal background clutter.
2. Problem Statement	Quantify the specific, validated market pain point. Explicitly detail who faces this issue and isolate the financial or operational cost of non-resolution.	Data graphics, direct validation metrics, user pain charts.
3. The Solution	Detail your operational technology or service and how it uniquely neutralizes the targeted market problem. Focus on value capture and customer simplicity.	Clear UI/UX screens, physical prototype photos, or architecture.

4. Stage & Traction	Disclose your verified current operational standard (e.g., POC, functional Prototype, MVP). Showcase growth velocity during the cohort.	Traction curves, user onboarding counts, phase milestones.
5. Business Model	Articulate the explicit revenue engine (e.g., SaaS, B2B enterprise transactional, marketplace commissions, freemium conversion paths) and targeted consumer profiles.	Pricing matrix, unit economics breakdown, addressable market scale.
6. The Team	Summarize the specialized execution capacity of the founders. Highlight technical competencies, unfair domain advantages, and defined operational roles.	Professional headshots, brief summaries of execution capability.
7. The Ask	State your exact next-tier resource requirement (e.g., scale of funding, institutional access, industrial pilot validation, deep technical mentorship allocation).	Milestone schedule showing exactly how resources will be deployed.

3. CORE EVALUATION CRITERIA

The panel will issue quantitative scores across four foundational disciplines. Execution metrics are not judged solely on your final pitch, but on documented progression throughout the cohort:

- **Strategic Model & Insight Clarity:** Evaluation of deep problem understanding, addressable market definitions, and clear grasp of customer persona insights. Real data is required over generic secondary reports.
- **MVP/Prototype Functional Quality:** Direct assessment of the usability, technical architecture, and real-world viability of your Minimum Viable Product or Proof of Concept. Static mockup slides receive zero weight.
- **Programmatic Execution Consistency:** Evaluation of week-over-week growth, responsiveness to performance metrics, milestone completions, and operational agility documented across the incubation timeline.
- **Validation Rigor & Traction Strength:** Quantitative grading of user engagement metrics, pilot indicators, and objective evidence gathered from genuine customer discovery interactions.

4. MANDATORY PROGRAM OUTCOME DELIVERABLES

To achieve formal validation and certification from the Ratan Tata Innovation Hub, each incubating entity must demonstrate compliance across these five specific final outcomes by Demo Day:

Required Deliverable Target	Validation Standard Expected
Outcome 1: Validated Business Model	A fully resolved customer acquisition strategy with definitive transactional mechanics and transparent unit-level margins.
Outcome 2: Structured Product Logic	A rigorous, end-to-end mapped user journey demonstrating a comprehensive framework for user retention.
Outcome 3: Working MVP or POC	A concrete, stable functional prototype ready for execution testing, verification, or investor evaluation.

Outcome 4: Initial User Validation	Documented qualitative and quantitative feedback cycles extracted directly from early trial participants and target users.
Outcome 5: Investor-Ready Pitch Asset	A finalized, robust, professionally designed pitch asset that perfectly matches the technical delivery constraints.

5. TECHNICAL SUBMISSION GUIDELINES

- **The 6x6 Content Rule:** Slide structures must contain a maximum of 6 bullet items per canvas, with no more than 6 descriptive words per line. Rely on spatial layout and visual hierarchies rather than text density.
- **Format Constraints:** Submissions must be delivered exclusively as flattened PDF documents or standard Google Slides links.
